GLASS OPTIONS v7 UPDATE OCT 2023

THE NEW STEP-UP Windows Glass Options UPDATE AVAILABLE MAP

Low-E, or low-emissivity energy-efficient coatings, keep winter heat from leaking out and keep summer heat from coming in, keeping your home comfortable. Our double-pane windows contain two different coatings working together to control your energy costs. Options, like color tinted air-glass, you may also be interested in, are available to meet your needs.

UNITED window & door

9600 Series Optional Tilt & Lock Window Operation with WOCD (Window Operational Control Device)

<h4>Vent Bottom Sash</h4> <p>Turn both tilt & lock latches inward 120° until it clicks</p>	<h4>Open Bottom Sash</h4> <p>Lift bottom sash 4" or until it stops</p>
<h4>Tilt Bottom Sash for Cleaning</h4> <p>Turn both tilt & lock latches inward 120° until it clicks</p>	<h4>Restore Sashes & Lock</h4> <p>Restore top sash, then twist latches on bottom sash inward a full 180° before restoring bottom</p>

- Fabricated Lobby Proposal with 3D renderings
- Photographed images for Lowes.com
- Created Instructional Sheets

Our members SAVE MORE. Get more options at a low price and members get more.

UNITED window & door

194" - 309" | 209" - 276" | 249" - 409" | 209" - 309"

Security Features: With optional Window Operational Control Device (WOCD), bottom and top sashes will open 4" to vent, while the window stays locked.

***If either sash is disengaged after restoration, the sash needs to be reengaged with the balance shoe. Follow the procedure below that applies to your specific situation.**

Top Sash: Tilt the top sash. While tilted, bring the sash down as far as it will go. Then restore the sash again. The sash should now be reengaged with the shoe and no longer disengaged.

Bottom Sash: Tilt the bottom sash. While tilted, bring the sash up as far as it will go. Then restore the sash again. The sash should now be reengaged with the shoe and no longer disengaged.

MERCK'S COMMITMENT TO ADDRESSING NON-COMMUNICABLE DISEASES (NCDs)

NON-COMMUNICABLE DISEASES (NCDs) — CANCER, CARDIOVASCULAR DISEASE, DIABETES, MENTAL HEALTH CONDITIONS AND RESPIRATORY DISEASES — ARE A GROWING GLOBAL HEALTH CRISIS.

TOGETHER, WE CAN HELP ADDRESS THE U.N. SUSTAINABLE DEVELOPMENT GOAL OF REDUCING MORTALITY FROM NCDs BY 2030.

More than 70 million NCD deaths in the United States and globally have a significant impact on the lives and health of individuals. Merck is committed to addressing this global health crisis.

A GROWING GLOBAL CRISIS

According to the World Health Organization (WHO), NCDs are the leading causes of death and disability worldwide. Globally, they account for 71% of all deaths and 85% of the burden of disease. In 2019, NCDs caused 40 million deaths, with 17 million of those deaths preventable. NCDs are a leading cause of death and disability worldwide, and they are a growing global health crisis.

NCDs cause 71% of all deaths and 85% of the burden of disease worldwide. They are a leading cause of death and disability worldwide, and they are a growing global health crisis.

WHO estimates that 10 million people die each year from NCDs. This is a significant public health burden, and it is a growing global health crisis. Merck is committed to addressing this global health crisis.

"More than 50 years ago, when faced with the daunting task of saving lives, we joined forces with others to address the global health crisis. Today, we are still committed to addressing this global health crisis, and we are still committed to addressing this global health crisis."

— Ken Frazier, Chairman & CEO

ENSURING ACCESS TO SUSTAIN AND SAVE LIVES

Working Together to Improve Access Around the Globe for NCDs

Our global health strategy is focused on ensuring access to essential medicines, diagnostics, and vaccines. We are committed to ensuring that these products are available to all people, regardless of their location or economic status.

Our access to medicines strategy is focused on ensuring that essential medicines are available to all people, regardless of their location or economic status. We are committed to ensuring that these products are available to all people, regardless of their location or economic status.

NCDs are a leading cause of death and disability worldwide. They are a growing global health crisis. Merck is committed to addressing this global health crisis.

We are committed to ensuring that essential medicines are available to all people, regardless of their location or economic status. We are committed to ensuring that these products are available to all people, regardless of their location or economic status.

Through our global health strategy, we are committed to ensuring that essential medicines are available to all people, regardless of their location or economic status.

PROMOTING HEALTHY LIFESTYLES TO PREVENT NCDs

NCDs: The Health Crisis We Can Prevent

More than 70 million NCD deaths in the United States and globally have a significant impact on the lives and health of individuals. Merck is committed to addressing this global health crisis.

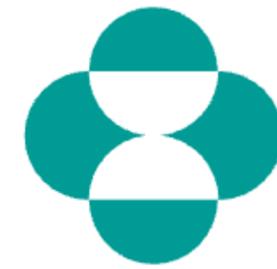

WHO estimates that 10 million people die each year from NCDs. This is a significant public health burden, and it is a growing global health crisis. Merck is committed to addressing this global health crisis.

Product Monograph for Oncology

II. Overview of Interferons and INTRON A

Rationale of Interferons

Interferons (IFN) are a group of naturally occurring small protein and glycoprotein molecules that are secreted by cells in response to viral infection and play an essential role in the body's defense against viral infection. They are produced and secreted by a number of cell types, including fibroblasts, epithelial cells, and leukocytes. They act on target cells to inhibit viral replication and to stimulate the immune system.

Types of Interferons

Interferons are classified into three main types: Type I (including IFN- α and IFN- β), Type II (IFN- γ), and Type III (IFN- ω). Each type has distinct properties and clinical applications.
